Software Developer

Join Us

Our digital health staff share our commitment to improving the healthcare system for the communities in which we live and work. Our senior recruiting and staffing team have deep roots in the Information Management/Information Technology (IM/IT) sectors, with years of education and training in this specialized field so we understand how information technology intersects with healthcare operations and management. You could apply your IM/IT skills anywhere, but on our dynamic team you help advance healthcare delivery like never before.

Due to our strong relationships with hospital chief information officers (CIOs) and key government agencies in digital health, we have placed over 2,500 professionals into a variety of temporary and permanent positions in hospitals and other healthcare organizations. Let us be your gateway to building your personal brand and career in digital health.

Duties and Responsibilities

- Focus on building software applications to fulfill the business objectives and end-user needs, including analyzing, documenting, and modifying software specifications throughout the software production lifecycle
- Effectively analyze problems to deliver creative and logical solutions using sound design principles that satisfy functional and non-functional requirements
- Convert system and program specifications into production code according to the methodology standards in the application development area
- Work with multifunctional development teams to ensure process and product alignment during early phase development, while collaborating with other developers to create new modules and other components and enhancements to existing software application portfolio
- Ensure production software is well documented with the use of comments in the code, and key characteristics and functionality of the module according to software documentation standards
- Participate in the overall functioning of the development team using existing standard and best practices

Our Requirements

- A diploma or degree in computer science, healthcare administration or medical informatics or equivalent experience
- 4 to 8+ years' of experience as a software developer for complex IM / IT projects using a subset of: C#, dot Net, Java, JavaScript, SQL, MySQL, NoSQL, HTML, GIT, JIRA, jQuery, Servlets/JSP, SSRS, SSIS, SOAP, REST, Python, Perl, React, Redux, Angular, SharePoint and the plethora of other language and key programming tools

- Good experience in quality assurance using black box, white box and other testing methodologies
- Excellent problem solving and interpersonal skills, including written and spoken communication skills
- Ability to document processes inside the programs, and in accordance with departmental documentation standards
- A good overall understanding of the regional health information systems is an asset

About Us

Established in 1982, Carecor is a dominant provider of staffing services to healthcare facilities in Ontario and Nova Scotia. We provide clients with a full spectrum of healthcare workers specialized in patient care, digital health, and medical administration. In addition to celebrating our quality staff, we are proud recipients of the "Exemplary Standing" award from *Accreditation Canada*.
